

TaskVault

Fixed prices. Earned trust. Guaranteed payment.

A task board for freelancers on Stellar: one big project, split into tasks, each one paid in USDC from its own escrow.

Built on Stellar · HackMeridian 2026 · Track Stellar Composed

01 · ONE BIG PROJECT, MANY EXPERTS

A big project, split into tasks. Each freelancer picks one and names a price.

Task	Budget	Expert	Agreed price
Landing page	up to 300	Léa	280 USDC
Freighter integration	up to 500	Yanis	480 USDC
Dashboard	up to 400	Nora	400 USDC

01
Pick the task you want

02
Propose a price ≤ budget

03
Score ranks, price × 0

04
The company chooses

IN THE APP · candidates with their price

02 · SPONSORSHIP · NEXT STEP

No reviews → no missions → still no reviews.

A recognised freelancer sponsors a newcomer. The loop breaks.

Follow the people you work with often. A sponsor lends their trust, so a beginner with no history can still land a first mission.

03 · SECURITY AT THE CORE

Nobody gets scammed — on either side.

No account, no password

Sign a SEP-53 message in Freighter. Unique, expires in 5 minutes. Nothing to steal.

A deposit protects freelancers

The company locks a deposit before its project is listed. A ghost listing forfeits it to the guarantee fund.

Money locked before work

One escrow per task, funded once the freelancer is chosen. Every move is signed in your own wallet, never by us.

Anti-cheat

Each signed transaction must match the planned payment; replays are refused. Delivery fingerprint on chain.

Verified links

A freelancer’s link shows a warning when its domain is unknown.

Disputes

An arbiter settles it and can split the money, e.g. 70 % freelancer, 30 % company.

04 · TRACK STELLAR COMPOSED

7 Stellar building blocks, one flow.

Freighter
Identity + signature: it’s your account.

Trustless Work
One vault per task: lock, deliver, validate, release, dispute.

Soroban
The smart contracts where the vaults live.

USDC · Circle
A stable dollar to pay, no volatility.

Horizon
Live balances, trustlines, payments.

Stellar SDK
Build and send the transactions.

stellar.expert
Every transaction public and verifiable.

Composed: each block does one job; TaskVault wires them into a single payment flow.

05 · THE MONEY PATH

Four signatures, from deposit to payout.

01 · Company
Deposit
Chooses the freelancer, funds the task's vault.

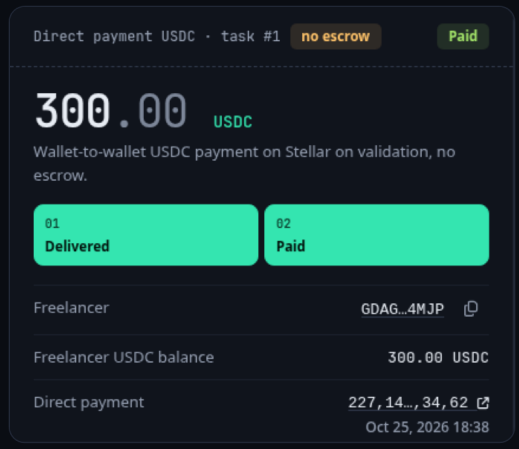

02 · Freelancer
Deliver
The link is recorded on chain.

03 · Company
Validate
Rates the work 1 to 5, releases.

04 · Freelancer
Paid
USDC in the wallet.

~5 s

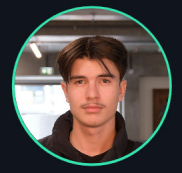

from validation to the freelancer's wallet, for a fraction of a cent.

IN THE APP · task paid

TaskVault

Fixed prices. Earned trust. Guaranteed payment.
